

Leader don't follow steps
... marks the way

WHAT IS A GALAXY CONVOY ?

A pack of 4 Galaxy barriers (code: BGP-145) connected, one to each other, and placed in a metal cart; its a unique piece, versatile (can be filled with sand or water or can be used empty) and easy to handle with its special grip.

HOW A GALAXY CONVOY WORKS?

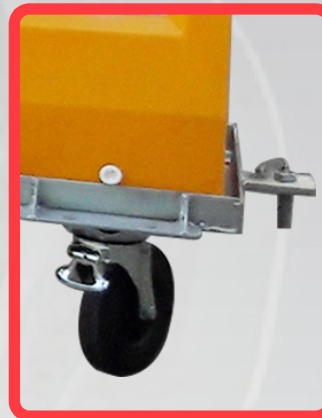

Its main function is to avoid vehicles pass or invasion of forbidden areas like pedestrian zones or bicycle protected lanes. Its a traffic marker.

RECOMMENDED USE

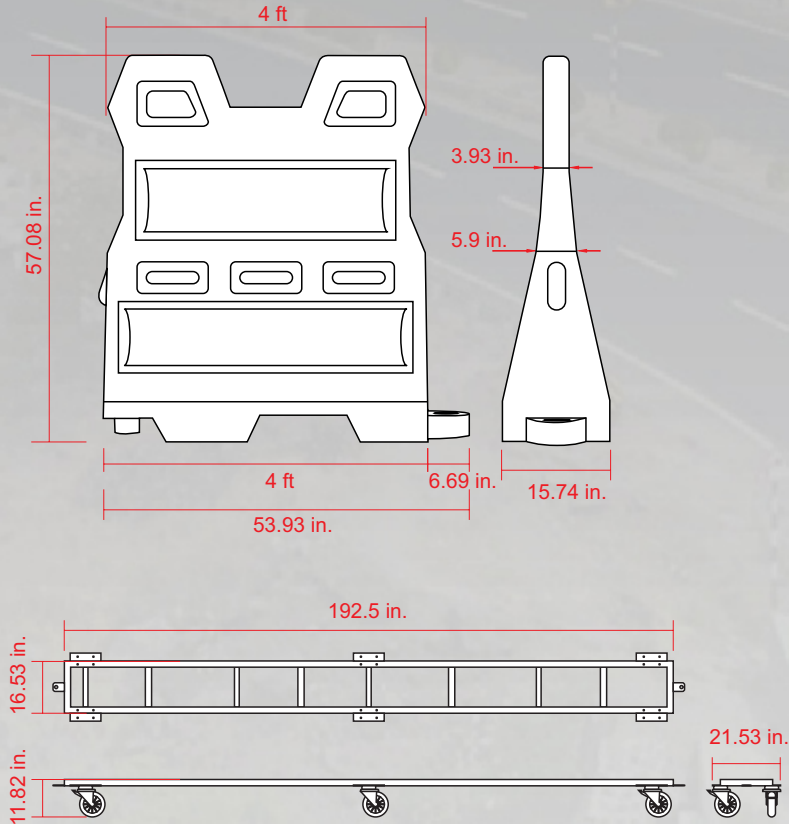

Suggested use in large rows to distribute the street room, but also in curves. Must be placed to make a more safety environment.

FEATURES

- Ideal barrier convoy to channel traffic, mark different zones or respect lines.
- Its number and position depends on the road and the type of work in process.
- The arrangement has stability for a reliable performance.
- The metallic cart is loaded with 4 assembled Galaxy barriers (code: BGP-145) made out in polyethylene.
- Structure made out with straight angle profile 2" x 3/16" and steel bar 3/16" y 1/2" x 3".
- Has six cart wheels 8", 4 of them with brake.
- Line color is orange (other colors on demand).
- Great performance, structural resistant and long life durability.
- Cover any official specification on design, size and functionality
- All weather resistant.
- UVray protection included.
- Can be fill-in with water or sand or can be used empty.
- The shark thin on its shape guarantees stability.
- Form a continued barrier with its couple assembly male-female.
- Specific valve for fill-in and another for drainage.

Measures are nominal and can vary,
between $\pm 2\%$.
