WHAT'S THE BICYCLE FLOOR TILE?

Its the tactile part of our engineered bicycle track protected lanes equipment for a complete signalise on-floor too.

The tile must be installed on floor to mark the limit of protected lanes. Made out in chloride poliyvinyl PVC to resist everything for a long time.

Is an important signal for all kind of drivers.

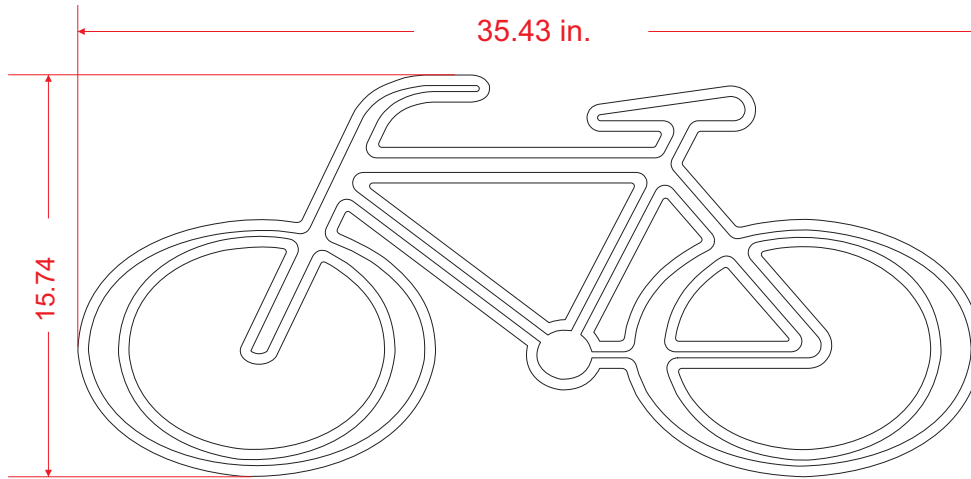

Mainly for use in protected bicycles lanes but also in parks or whenever is necessary to guide traffic.

Features

- This new urban furniture is a big sign for use in protected tracks.
- Tactile big lettering can be used to indicate the beginning of protected lanes. Its edges has anti-skid design.
- Commonly the **PVC BICYCLE FLOOR TILE** comes in white color to better contrast with dark floors.
- Absolutely resistant to all weather conditions also UV rays.
-
- This equipment doesn't interfere with pedestrian or vehicle crossing in any form.
-
- Easy installation with epoxic glue on cement roads or asphalt roads (not included). You can use an equivalent.

Measures are nominal
and can vary,
between +- 2%.

Measure

Total (assembled): 35.43 x 15.74 in.

Height: 0.39 in.

Body color: White

Easy to install. First clean the area and keep it clear of dust, solvents, holes, dirt and else.

On this recommended installation most use an epoxic glue for better results.

Epoxic Glue commonly comes in a variety of forms, you may decide to use a two component formula.

Attached to product you'll find a marker to draw with precision on ground the tile perimeter.

Glue it with your product of election and install with gently smashes all over the tile with a rubber hammer.

Can use other methods by your own.
