

**YELLOW CONE WITH A
RED LIGHT**

Features

- Made in one piece of Poliflexy®, a material that grants it flexibility and higher resistance to impacts. In addition, it returns to its original form after run overs.
- The base has the option of being ballasted which reinforces its stability.
- Line colors: Orange or yellow (other colors upon request).
- Since it's stackable, it facilitates its transportation and storage.
- It has the option of adding a reflective stripe to increase its visibility at night.

LIGHTING SYSTEM

- 12 ultra-bright flashing red LEDs.
- 6 ultra-bright fixed red LEDs.
- Smart solar power system
- 85 mm solar panel.
- Two 1.5V batteries
- It can run up to 60 hours on a single solar charge of 5 hours.

A leader doesn't follow steps, **he marks the way.**

LUX CONE BENEFITS

It includes fixed or flashing synchronized LEDs that light up the road and are visible from greater distances. If one of them breaks, the others keep working without a problem.

The Poliflexy® cones far exceed the PVC cones and include UV protection.

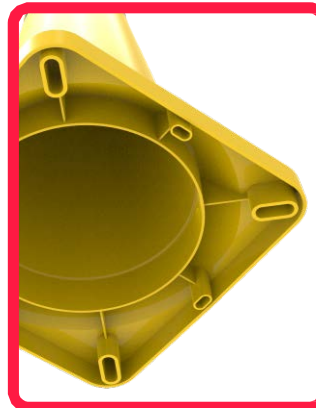

It lasts about ten years without losing color or breaking from exposure to the sun.

The mica protector on top doesn't detach or bounce even if it gets run over.

Useful in highways to prevent accidents, and warn about work zones or closed roads.

Perfect for parking lots since it uses little space and is stackable.

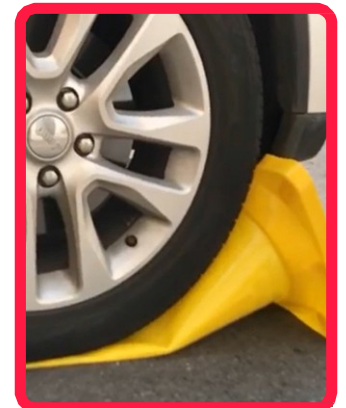

Mainly suggested in work zones, highway repair zones, or wherever you want to mark any danger or detour.

The weighted base and its finishings make it more stable.

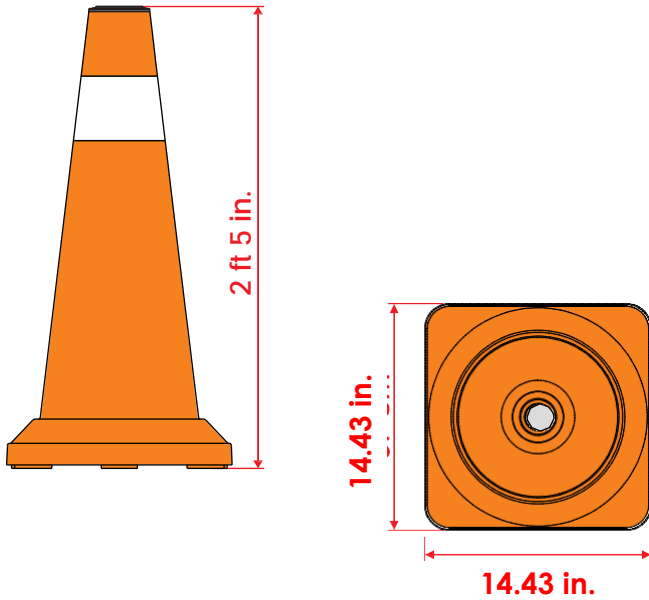

Solar panel

It bears multiple run overs.

Volumes, dimensions, and other measures and may vary by approximately 2%

Measures

Measures: Height: 2 ft 5 in.
14.43 in. × 14.43 in.

Reflective: One white stripe of 3.90 in. height
