

A leader doesn't follow steps  
... he marks the way

## WHAT IS A DETOUR POST?

It is an excellent luminous device whose main function is warning on the proximity of a detour. It is recommended installing it in traffic exits and accesses. In case of vehicle collisions or impacts it absorbs part of the blow and recovers its vertical position.

## FEATURES

- Manufactured in medium-density polyethylene and it can be made in yellow, orange or white in illuminated models.
- Maintenance-free, easy handling and it's protected against UV rays.
- It has a conical body and great height for better visibility.
- It is easy to install with three drill screws and **Extralarge** dubels (not included). It can be movable too.
- It includes a reflective area for better visibility at night.
- The top half (the paddle) can be circular or triangular and it can be added advertising or any message.
- The illuminated models can be connected to electricity current.

### ELECTRIC POWERED OPTION

- A well illuminated sign enhances its visibility.
- Their light system on top consists of a high intensity 180 LEDs (RGB50/50) with a 120-degree opening angle which is strategically distributed to "bathe with light" the entire surface.
- In the lower light system, the post is also illuminated with a LED tube finished in translucent blue of 18w.
- The system operates with 110-240 volts.

### SOLAR POWERED OPTION

- It is composed of a photocell and a battery bank. Our solar powered system is a power circuit that charges during natural light hours which guarantees the operation of a signal device with full charge in a luminous day for a period of 8 to 10 hours.

Volumes, dimensions and other measures are nominal and may vary approximately 2 %.

## Measurements

<b>Total:</b>	Length: 26.77 in. Width: 16.92 in. Height: 5 ft 1 in. (61 in.)
<b>Reflective:</b>	Prismatic High Intensity Engineer Grade
<b>Reflective color:</b>	Varies depending on the purpose of the sign.
<b>Weight (empty) aprox.:</b>	44.09 lb.
