

# STAINLESS STEEL PARKING STOP WITH REFLECTIVE SPHERES

Code: TP-30

## Features

- \* Resistance to high impacts and bumps.
- \* It's perfect for pedestrian crossings, checkpoints, road junctions, turns, and delimiting parking lots.
- \* UV protection and weather resistance.
- \* Easy to install.
- \* One bolt (optional).
- \* It has 27 spheres of Ø 0.42 in.
- \* Forces to a full stop.

## Technical specifications

- |                                           |                                                     |
|-------------------------------------------|-----------------------------------------------------|
| * Made of:                                | Stainless steel.                                    |
| * Color:                                  | Natural.                                            |
| * Measures:                               | Length: 8.5 in. Width: 3.66 in.<br>Height: 1.17 in. |
| * Reflectives:                            | 27 spheres.                                         |
| * Spheres color:                          | amber.                                              |
| * Angle of inclination of the reflective: | 27.5°.                                              |
| * Reflective surface:                     | 5 in <sup>2</sup> .                                 |
| * Useful contact surface:                 | 32.68 in <sup>2</sup> .                             |
