WHAT IS THE DOUBLE HYDROFLOWER POT?

The **Double HydroFlower Pot** is manufactured in medium density polyethylene, by plastic injection process, so its a one piece element without added parts. This helps in its composition to prevent ruptures or tension points that could affect its performance during every day use

- All weather resistant.
- U.V. ray protected.
- Water reservoir with double wall.
- 7 points for water re-absorption.
- Drain valve.
- Does not require any special installation for place it.

BENEFITS:

The **Double HydroFlower Pot** is a modular system recommended as **a channelizer for protected bicycle lanes** and also for house or buildings and offices decoration item.

Has enough water capacity and also a re-absorption system of the liquid reducing the care and maintenance needed for a health plants growing. For example, vegetables can grow on the container keeping in fresh condition.

This combines with the natural ecological bicycle lane concepts, but also for any closed environment like offices or houses.

As an urban furniture is also useful in parks, squares, flat roofs and elsewhere.
